

RecallChek

Making America's Homes Safer

One appliance at a time . . .

Since 1974, American citizens have been protected from dangerous items in their homes by law. If a manufacturer has designed a dangerous product, they MUST recall all those items and FIX THEM FOR FREE!

The problem in the law is that most often it's up to you, the consumer, to find out whether your appliances are potential fire or safety hazards!

There's a database online, but you would have to wade through 195 MILLION recalled items to find out if your dishwasher or air conditioner is a potential hazard.

As a result, many of these dangerous appliances are still in homes across America.

RecallChek

RecallChek is the first service for consumer recalls in the United States.

RecallChek has compiled over 195 million recalls from public records, and created a fail-safe system to check for dangerous flaws with home appliances.

How it works:

- ✓ Your Home Inspector will copy the model numbers of your built-in home appliances and HVAC system.
- ✓ The inspector will send us your recall Model Number Report. (Home inspectors are often NOT allowed to move appliances)
- ✓ At RecallChek Headquarters, your model numbers are computer matched against MILLIONS of recalls using our Model Number Algorithm (MNA).
- ✓ We then hand-check the report, to eliminate wrong numbers from worn plates and ID cards, and other problems.
- ✓ In the event of a potential recall, RecallChek issues a report including
 - ¹⁾ the nature of the recall,
 - ²⁾ where the product was sold,
 - ³⁾ how to remedy the defect, and
 - ⁴⁾ how to get the item repaired / replaced most times absolutely FREE
